Introduction

The Student Study Planner is a simple web-based project that helps students organize their academic tasks in one place. The idea came from a common problem that many students face, which is keeping track of subjects, assignments, exams, and deadlines at the same time.

Instead of using different notes, reminders, or apps, this website gives students a clearer way to view what they need to do. The project focuses on making the study planning process easier and more organized through a simple and user-friendly interface.

Business Problem

Many students have several subjects, tasks, exams, and deadlines to manage during the semester. This can sometimes be confusing, especially when the information is written in different places or saved in different apps.

Because of this, students may forget important deadlines or feel stressed when they do not have a clear overview of their work. The main problem is not the tasks themselves, but the lack of one simple place that helps students organize and follow their academic responsibilities.

Proposed Solution

Our group designed the Student Study Planner as a simple solution to this problem. The website allows students to add , manage, complete, and delete tasks and exams while viewing upcoming deadlines The dashboard gives a quick summary of unfinished tasks, current subjects, and important deadlines. This helps the student understand what needs attention first without going through many different pages or tools.

The system includes:

- A dashboard that shows the most important study information

- A subjects page to add and view current subjects

- A tasks and exams page to add, complete, or delete tasks

- A deadlines page to view upcoming deadlines and progress

The main goal is to keep the website simple, clear, and easy to use.

Project Goals and Enhancements

The goal of this project is to create a basic but useful study planning website for students. We focused on making the design clean and the features easy to understand.-

The main goals are:

- Helping students organize their study tasks in one place

- Making deadlines easier to track

- Allowing students to manage subjects, tasks, and exams

- Showing a quick overview through the dashboard

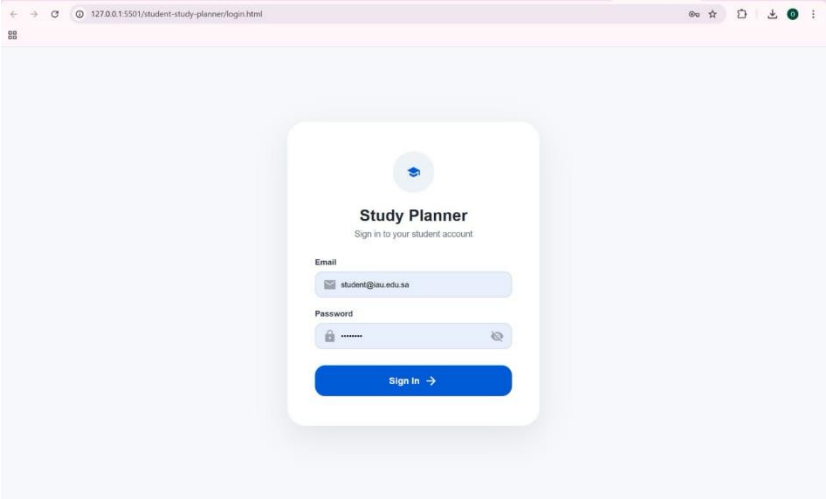
- Making the website simple enough for students to use without confusion

During the design process, we used a clean layout with cards, soft colors, and clear sections. We also created the prototype first to plan the pages before starting the development.

System Pages and General Description

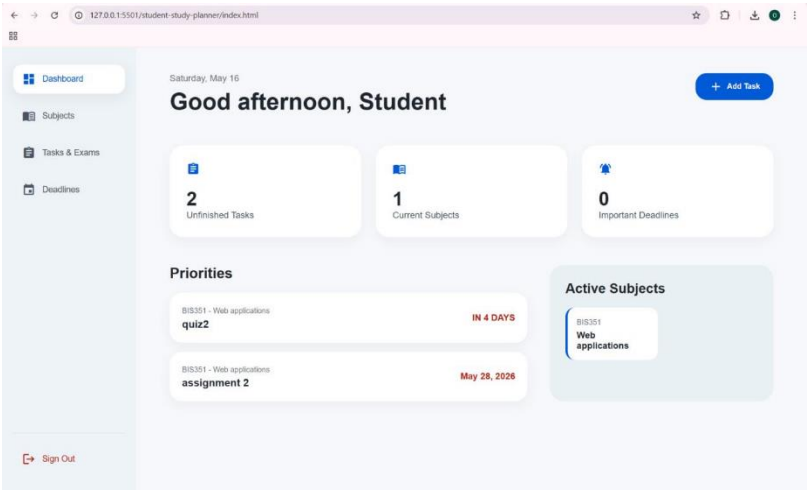
Login Page:

The Login page allows the student to access the website through a simple sign-in interface before entering the planner system.



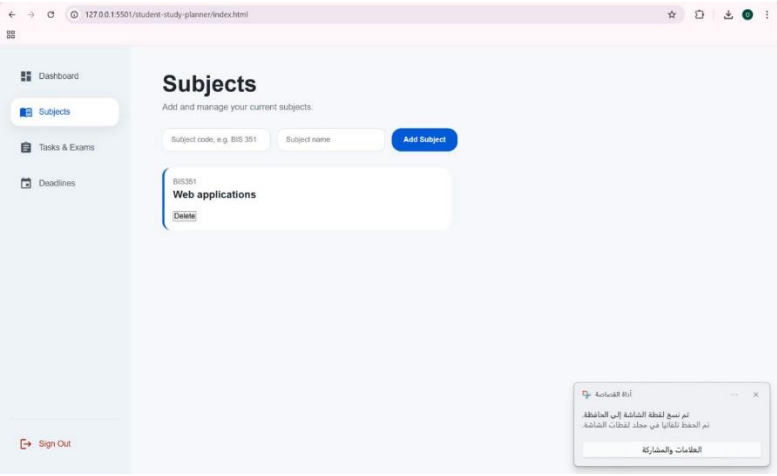
Dashboard Page:

The Dashboard gives the student a quick overview of their academic progress. It shows unfinished tasks, current subjects, important deadlines, and priority tasks that need attention.



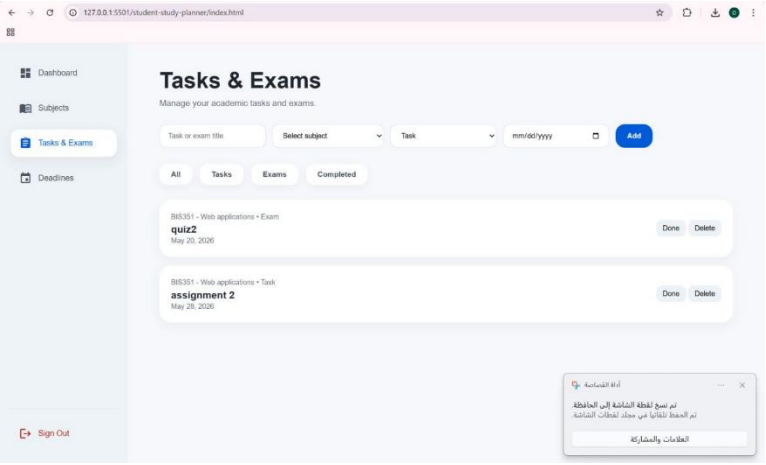
Subject Page

The Subjects page allows students to add and manage their current subjects. Students can view all added subjects and organize their academic courses in one place



Tasks & Exams Page

This page helps students add, manage, complete, and delete tasks or exams. Students can also filter tasks by category such as Tasks, Exams, or Completed items.



Deadlines & Progress Page

The Deadlines page displays upcoming deadlines and shows the student's overall progress, including total tasks, completed tasks, and pending tasks.

Full Task Schedule

#	Date	Task Name	Responsible Party	Status
01	Apr 5-6	Define project idea & business problem	Yasmine	Completed
02	Apr 6-7	Define proposed solution & system scope	Sumaiah	Completed
03	Apr 8-9	Identify project goals and key features	Reema	Completed
04	Apr 10-13	Design dashboard layout and cards	Yasmine	Completed
05	Apr 12-15	Design subjects page and task flow	Sumaiah	Completed
06	Apr 14-18	Design tasks/exams and deadlines pages	Reema	Completed
07	Apr 19-20	Create GitHub repository and folders	Retaj	Completed
08	Apr 20-23	Set up HTML, CSS, and JavaScript files	Reema	Completed
09	Apr 24-27	Build dashboard summary interface	Yasmine	Completed
10	Apr 27-30	Build subjects management page	Sumaiah	Completed
11	Apr 30-May 3	Build tasks and exams page	Retaj	Completed
12	May 2-5	Build deadlines and progress page	Reema	Completed
13	May 4-7	Add/manage/complete/delete tasks	Sumaiah	Completed
14	May 6-8	Connect pages and test navigation	Retaj	Completed
15	May 7-9	Improve deadline tracking and progress display	Yasmine	Completed
16	May 9-11	Test website, fix errors, and polish design	Reema	Completed
17	May 10-14	Write and finalize final project report	Retaj	Completed
18	May 15-16	Complete final Gantt chart and review	Yasmine	Completed
19	May 16	Final project submission	Sumaiah	Completed
